## Executive Summary

Agriculture, natural resources, and food industries remain a significant force in the economy of Florida, and it is important to recognize the economic contributions of these industries to ensure informed public policy. The economic contributions of these industries were evaluated for calendar year 2015 to update previous reports and provide current information on economic trends.

This analysis was conducted using the *IMPLAN* regional economic modeling system and associated state and county databases (*IMPLAN* Group LLC) to estimate economic multipliers and contributions for over 500 different industry sectors. Multipliers capture the indirect and induced economic activity generated by re-spending of income or sales revenues in a regional economy. The analysis includes 121 industry sectors that represent the broad array of activities encompassed by agricultural and natural-resource commodity production, manufacturing, distribution, and supporting services in Florida. Economic contributions can be measured in terms of employment, industry output, value added, exports, labor income, other property income, and business taxes. A glossary of economic terms is provided in this document.

The economic contributions of Florida agriculture, natural resources, and food industries for 2015 are summarized in Table ES1, and include the following:

- Industry output or sales revenues were \$160.714 billion.
- Foreign and domestic exports were \$60.529 billion.
- Agriculture, natural resources, and food industries had 1,616,235 full-time and part-time direct jobs, representing 14.1 percent of all jobs in the state.
- An additional 655,877 jobs were indirectly connected to these industries for a total employment impact of 2,272,113 jobs, representing 19.8 percent of total state employment.
- Direct value added was 78.586 billion and total value added impact (including multiplier effects) was \$132.035 billion, representing 14.7 percent of Gross State Product.
- Total labor income impact was \$81.038 billion, including employee wages, fringe benefits, and proprietor income.
- Total property income impact was \$37.997 billion, representing rents, dividends, interest, royalties, etc.
- Taxes on production and imports paid to local, state, and federal governments totaled \$13.000 billion.

Across the various industry groups, total employment and value added impacts were largest for Food and Kindred Products Distribution (1.47 million jobs; \$78.833 billion), which includes food service establishments (restaurants) and retail food stores, followed by Agricultural Inputs and Services (271,940 jobs; \$15.053 billion); Crop, Livestock, Forestry, and Fisheries Production (212,959 jobs; \$12.715 billion); Food and Kindred Product Manufacturing (151,432 jobs; \$13.898 billion); Forest Product Manufacturing (73,040 jobs; \$6.550 billion); Mining (48,826 jobs; \$2.651 billion); and Nature-Based Recreation (42,475 jobs; \$2.336 billion). Excluding the Food and Kindred Products Distribution industry group, total value added impacts represented 5.94 percent of Gross State Product and employment contributions were 6.99 percent of total state employment.

Information on economic contributions was also evaluated for seven agricultural commodity groups that have identifiable market-chain linkages between production and processing/manufacturing sectors. The total employment and value added contributions were highest for the Environmental Horticulture group (182,546 jobs; \$8.661 billion), followed by Fruit and Vegetable Farming and Processing (90,050 jobs; \$6.032 billion); Forestry and Forest Products (80,849 jobs; \$7.010 billion); Livestock Farming and Animal Products Manufacturing (34,442 jobs; \$1.921 billion); Sugarcane Farming, Refined Sugar, and Confections (18,765 jobs; \$1.644 billion); Fishing and Seafood Products (13,745 jobs; \$730 million); and Grain and Oilseed Farming and Processing (3,702 jobs; \$332 million).

Geographically, the size and composition of agriculture, natural resources, and related food industries varies dramatically across the state of Florida due to differences in climate, natural resource endowments, and population and settlement patterns. The largest economic contributions occurred in the major metro areas of Miami-Ft. Lauderdale, Orlando, Tampa-St. Petersburg, Sarasota-Bradenton, and Jacksonville, where there are large demands for food and kindred products, and a large workforce available for the industry (Table ES1). The eight largest counties in terms of total employment and value added impacts were Miami-Dade (273,336 jobs; \$17.325 billion), Orange (199,200 jobs; \$12.748 billion), Broward (188,484 jobs; \$10.913 billion), Hillsborough (180,161 jobs; \$12.695 billion), Palm Beach (172,133 jobs; \$10.600 billion), Duval (122,095 jobs; \$8.612 billion), Polk (108,340 jobs; \$7.898 billion), and Pinellas (89,083 jobs; \$4.442 billion). Additional detailed information on economic contributions in individual Florida counties is available in the Appendix.

Direct employment in agriculture, natural resources, and food industries in Florida grew from 1.252 million jobs in 2001 to a peak of 1.351 million jobs in 2008, declined during the Great Recession of 2009-10, then recovered to 1.616 million jobs in 2015, which was 29 percent higher than 2001, representing an average annual growth rate of 2.1 percent. Overall growth in industry contributions during this period reflected an increase in exports of Florida products to domestic and world markets. Average annual growth in employment contributions during 2001-15 was highest for Mining (10.5%), followed by Agricultural Inputs and Services (7.5%) and Food and Kindred Products Distribution (2.6%), while industry groups that had negative growth in employment contributions were Forest Products Manufacturing (-3.3%); Crop, Livestock, Forestry, and Fisheries Production (-1.6%); and Nature-Based Recreation (-1.3%).

**Table ES1.** Summary of economic contributions of agriculture, natural resources, and food industries in Florida in 2015, by industry groups and Florida regions

Industry Group	Direct Employment (Jobs)	Direct Industry Output (M\$)	Foreign and Domestic Exports (M\$)	Industry Output Impacts (M\$)	Employment Impacts (Jobs)	Value Added Impacts (M\$)	Labor Income Impacts (M\$)	Other Property Income Impacts (M\$)	Tax on Production and Imports Impacts (M\$)
Crop, Livestock, Forestry & Fisheries Production	130,327	11,276.6	7,220.2	22,429.4	212,959	12,714.7	7,861.3	4,274.6	578.9
Agricultural Inputs & Services	180,252	18,562.9	10,361.2	32,311.0	271,940	15,052.9	9,826.6	4,364.3	862.0
Food & Kindred Products Manufacturing	59,323	26,828.9	11,134.9	40,865.5	151,432	13,898.0	7,574.6	5,071.5	1,251.9
Forest Products Manufacturing	22,239	8,877.6	5,940.8	16,306.8	73,040	6,549.8	3,922.9	2,188.6	438.4
Mining	28,874	4,254.6	1,958.2	7,118.9	48,826	2,650.7	1,677.7	729.5	243.6
Food & Kindred Products Distribution	1,167,295	89,000.3	22,818.4	130,443.9	1,471,440	78,832.8	48,698.8	20,639.3	9,494.7
Nature-based Recreation	27,925	1,912.9	1,095.4	3,894.6	42,475	2,336.2	1,476.7	729.4	130.1
<b>Total All Industries</b>	<b>1,616,235</b>	<b>160,713.8</b>	<b>60,529.1</b>	<b>253,370.2</b>	<b>2,272,113</b>	<b>132,035.1</b>	<b>81,038.4</b>	<b>37,997.2</b>	<b>12,999.5</b>

Employment represents full-time and part-time jobs. Monetary values are given in millions of dollars.

Total impact estimates include regional multiplier effects.

Florida regions are functional economic areas defined by the U.S. Bureau of Economic Analysis.

Source: *IMPLAN* model and state/county data for Florida (*IMPLAN* Group LLC).

## Glossary of Economic Impact Terms

**Contribution** (economic) represents the gross change in economic activity associated with an industry, event, or policy in an existing regional economy.

**Employee compensation** is comprised of wages, salaries, commissions, and benefits such as health and life insurance, retirement and other forms of cash or non-cash compensation.

**Employment** is a measure of the number of jobs involved, including full-time, part-time, and seasonal positions. It is not a measure of full-time equivalents (FTE).

**Exports** are sales of goods to customers outside the region in which they are produced, which represents a net inflow of money to the region. This also applies to sales of goods and services to customers visiting from other regions.

**Final Demand** represents sales to final consumers, including households, governments, and exports from the region.

**Gross Regional Product** is a measure of total economic activity in a region, or total income generated by all goods and services. It equals the total value added by all industries in that region, and is equivalent to Gross Domestic Product for the nation.

**IMPLAN** is a computer-based input-output modeling system that enables users to create regional economic models and multipliers for any region consisting of one or more counties or states in the United States. The current version of the *IMPLAN* software, version 3, accounts for commodity production and consumption for 536 industry sectors, 10 household income levels, taxes to local/state and federal governments, capital investment, imports and exports, transfer payments, and business inventories. Regional datasets for individual counties or states are purchased separately.

**Impact or total impact** is the net change in total regional economic activity (e.g., output or employment) resulting from a change in final demand, direct industry output, or direct employment, estimated based on regional economic multipliers.

**Imports** are purchases of goods and services originating outside the region of analysis.

**Income** is the money earned within the region from production and sales. Total income includes labor income such as wages, salaries, employee benefits, and business proprietor income, plus other property income.

**Taxes on Production and Imports** are taxes paid to governments by individuals or businesses for property, excise, and sales taxes, but do not include income taxes.

**Input-Output (I-O) model and Social Accounting Matrix (SAM)** is a representation of the transactions between industry sectors within a regional economy that captures what each sector purchases from every other sector to produce its output of goods or services. Using such a model, flows of economic activity associated with any change in spending or employment may be traced backwards through the supply chain.

**Local** refers to goods and services that are sourced from within the region, which may be defined as a county, multi-county cluster, or state. Non-local refers to economic activity originating outside the region.

**Margins** represent the portion of the purchaser price accruing to the retailer, wholesaler, and producer/manufacturer in the supply chain. Typically, only the retail margins of many goods purchased by consumers accrue to the local region, as the wholesaler, shipper, and manufacturer often lie outside the local area.

**Multipliers** capture the total effects, both direct and secondary, in a given region, generally as a ratio of the total change in economic activity in the region relative to the direct change. Multipliers are derived from an I-O model of the regional economy. Multipliers may be expressed as ratios of sales, income, or employment, or as ratios of total income or

employment changes relative to direct sales. Multipliers express the degree of interdependency between sectors in a region's economy and therefore vary considerably across regions and sectors. A **sector-specific multiplier** gives the total changes to the economy associated with a unit change in output or employment in a given sector (i.e., the **direct or initial economic effect**) being evaluated. **Indirect effects multipliers** represent the changes in sales, income, or employment within the region in backward-linked industries supplying goods and services to businesses (e.g., increased sales in input supply firms resulting from more nursery industry sales). **Induced effects multipliers** represent the increased sales within the region from household spending of the income earned in the direct and supporting industries for housing, utilities, food, etc. An **imputed multiplier** is calculated as the ratio of the total impact divided by direct effect for any given measure (e.g., output, employment).

**Other property income** represents income received from investments such as corporate dividends, royalties, property rentals, or interest on loans.

**Output** is the dollar value of a good or service produced or sold, and is equivalent to sales revenues plus changes in business inventories.

**Producer prices** are the prices paid for goods at the factory or point of production. For manufactured goods, the purchaser price equals the producer price plus a retail margin, a wholesale margin, and a transportation margin. For services, the producer and purchaser prices are equivalent.

**Proprietor income** is income received by non-incorporated private business owners or self-employed individuals.

**Purchaser prices** are the prices paid by the final consumer of a good or service.

**Region or Regional Economy** is the geographic area and the economic activity it contains for which impacts are estimated. It may consist of an individual county, an aggregation of several counties, a state, or aggregation of states. These aggregations are sometimes defined on the basis of worker commuting patterns.

**Sector** is an individual industry or group of industries that produce similar products or services, or have similar production processes. Sectors are classified according to the North American Industrial Classification System (NAICS).

**Value Added** is a broad measure of income, representing the sum of employee compensation, proprietor income, other property income, indirect business taxes and capital consumption (depreciation). Value added is a commonly used measure of the contribution of an industry to a regional economy because it avoids double counting of intermediate sales.

## Introduction

Agriculture, natural resources, and food industries represent a broad set of economic activities generating employment and income, and producing goods and services that contribute to the economic growth and development of Florida and the United States. Florida has approximately 24 million acres (36,000 square miles) of forests, croplands and ranches, occupying about two-thirds of the state's land area. The state has a sub-tropical climate that enables production of an immense variety of food, fiber, and mineral commodities. The unrefined commodities are converted into finished products by the food and kindred product manufacturing industries, and finished goods then move through the wholesale and retail distribution chain to final consumers or to other industry sectors as intermediate goods for further value added processing. These industries are also linked to a broad array of allied suppliers that provide production inputs and supporting services. In addition, farmlands, timberlands, and other undeveloped natural lands provide an array of opportunities for nature-based recreation and eco-tourism. Thus, the chain of agricultural and related food industry activities encompasses “farm to table” and beyond.

The purpose of this study is to estimate the economic contributions or impacts of agricultural and other natural-resource based activities to the state of Florida. Economic impact analysis assesses the effect of a new or present activity, industry, or event on the overall economy of a region such as a state, county, or city. Any activity that generates payments has an effect on other parts of a given economy. Any expenditure by one entity becomes income to another entity. As an analogy, a stone thrown into a lake generates waves that spread out in all directions. In economic impact analysis, these secondary effects are measured through economic multipliers for each type of activity (industry sector) obtained from regional economic models.

Assessment of the economic contributions of specific industries to the economy of Florida is important to making informed public policy decisions regarding economic and community development, job creation, environmental regulation, labor and human resources, and taxation, among other issues. This report provides estimates of the economic contributions to the state of Florida in 2015 by a set of broadly defined industries comprising agriculture, natural resources, and related food and kindred product manufacturing and distribution activities. It updates and continues a series of previous annual studies completed for years 2006 through 2014 (Hodges, Rahmani, and Stevens 2016, 2015, 2014, 2013, 2012, 2011; Hodges and Rahmani, 2010, 2009; Hodges, Rahmani, and Mulkey, 2008).

## Methods

Data for this analysis were obtained from the *IMPLAN* model and Florida state/county databases for the 2001–2015 (2001-15) period licensed from *IMPLAN* Group LLC. The *IMPLAN* data are derived from the National Income and Product Accounts for the United States (U.S. Department of Commerce, Bureau of Economic Analysis), the Quarterly Census of Employment and Wages (U.S. Bureau of Labor Statistics), and other sources. *IMPLAN* characterizes more than 500 industry sectors. More than 110 *IMPLAN* sectors were identified as related to agriculture, natural resources, and food industries for basic commodity production, allied input supply and supporting services, food and kindred product manufacturing, forest product manufacturing, food and kindred product distribution, and nature-based recreation. Note

that some industry sectors in this analysis were reclassified from their original major industry group designation under the *North American Industry Classification System* (NAICS) to be included as part of the broadly defined agriculture and food-related industries. The rationale for including processing or manufacturing industries in this analysis is that they share a common dependence upon the agricultural and natural resource base, and would not exist in the state if not for the basic production activities. Food and kindred product distribution sectors, such as wholesalers, food stores, and restaurants, although not strictly dependent upon Florida's agricultural production and natural resources, were also included in the analysis because they are the endpoint of the market chain for the delivery of agricultural and food products to final consumers.

Economic contribution information was also re-grouped for several recognizable commodity groups that have strong linkages between agricultural production and processing/manufacturing sectors, as reflected in many vertically integrated firms or long-term supply contracts. These commodity groups included environmental horticulture (nursery and greenhouse production, landscape services, and retail garden centers); fishing and seafood products; forestry, logging, and forest product manufacturing; production and processing of fruits and vegetables; production and processing of grains and oilseeds; livestock production and animal products manufacturing; and, sugarcane farming and refined sugar manufacturing,

The total regional economic impacts for the agriculture, natural resources, and food industry sectors were estimated using models developed with the *IMPLAN* software for social accounting and impact analysis (*IMPLAN* Group, LLC 2016). This system enables construction of input-output models and social accounting matrices that represent the structure of a regional economy in terms of transactions among industry sectors, households, and governments. Regional economic models were developed for the state of Florida and for all 67 counties in the state using the *IMPLAN* software and Florida state-county data package for 2015. Models were constructed with econometrically estimated regional purchase coefficients representing the share of commodities purchased from local sources. Also, social-institutional accounts for households, local-state-federal governments, corporations, and capital investment were treated as endogenous within the models.

The *IMPLAN* model includes accounts for industrial and commodity production, employment, labor and property income, household and institutional consumption, domestic and international trade (imports, exports), government taxes, transfer payments (such as welfare and retirement), and capital investment. Economic multipliers are calculated for each industry to estimate the secondary effects of new demand that generate further economic activity being re-spent in the local economy (Miller and Blair 2009). Indirect effects multipliers represent the economic activity generated within specific supply chains through the purchase of intermediate inputs from vendor firms. Induced effects multipliers represent the impacts of spending by households of industry employees and by federal, state, and local government entities. The indirect and induced multipliers were applied only to foreign and domestic exports, or sales to visitors from outside the state of Florida, which represent new money flowing into the regional economy, while direct effects multipliers only were applied to the outputs sold to in-state markets. The total economic impacts were calculated as the sum of direct, indirect, and induced effects. Therefore, while the estimates of this analysis are referred to as "economic impacts," these values

may be better understood as "economic contributions" because they represent the ongoing economic activity of existing industries, rather than a net change in activity resulting from external influences (Watson et al. 2007).

Different measures of economic impacts reported here include industry output or revenue (sales), employment (full-time, part-time, and seasonal positions), value added, labor income, other property income, and tax on production and imports. Value added is a broad measure of net economic activity that is comparable to the Gross Domestic Product (GDP), and represents the sum of labor and other property income, taxes on production and imports, and capital consumption (depreciation). It is important to highlight the fact that estimating economic impacts on the basis of industry sales double-counts the sales from one level of the market chain to the next (e.g., sales of citrus juice products by processors include the value of citrus fruit purchased from growers). Economic impact assessments based on "value added" do not double-count because the value of intermediate inputs purchased from other sectors is netted-out. The glossary of economic impact analysis terminology explains these terms in detail.

Information on economic contributions was developed for the state of Florida, nine multi-county regions, and 67 individual counties. The multi-county regions encompass one or more core urban areas and adjacent nonmetropolitan counties that are economically linked by employee commuting patterns and media markets, as defined by the U.S. Bureau of Economic Analysis (Johnson and Kort 2004). It should be noted that some counties in north Florida that are part of economic areas in Georgia were regrouped with Florida regions for this analysis. Due to differences in trade flows and accounting adjustments at the state and county levels, slight discrepancies in regional results were reconciled by forcing county and regional estimates to match with state totals.

For some industry activities that did not fit into a single *IMPLAN* industry sector, values were estimated as a share of their parent sector based on employment data from the Quarterly Census of Employment and Wages (U.S. Bureau of Labor Statistics): Wholesale food distribution was 22 percent of Wholesale trade; Pest control services were 17 percent of Services to buildings; Retail lawn-and-garden centers were 1 percent of Building materials and garden equipment and supplies; and Golf courses and Recreational fishing were 45 percent and 0.1 percent, respectively, of Other amusement and recreation industries.

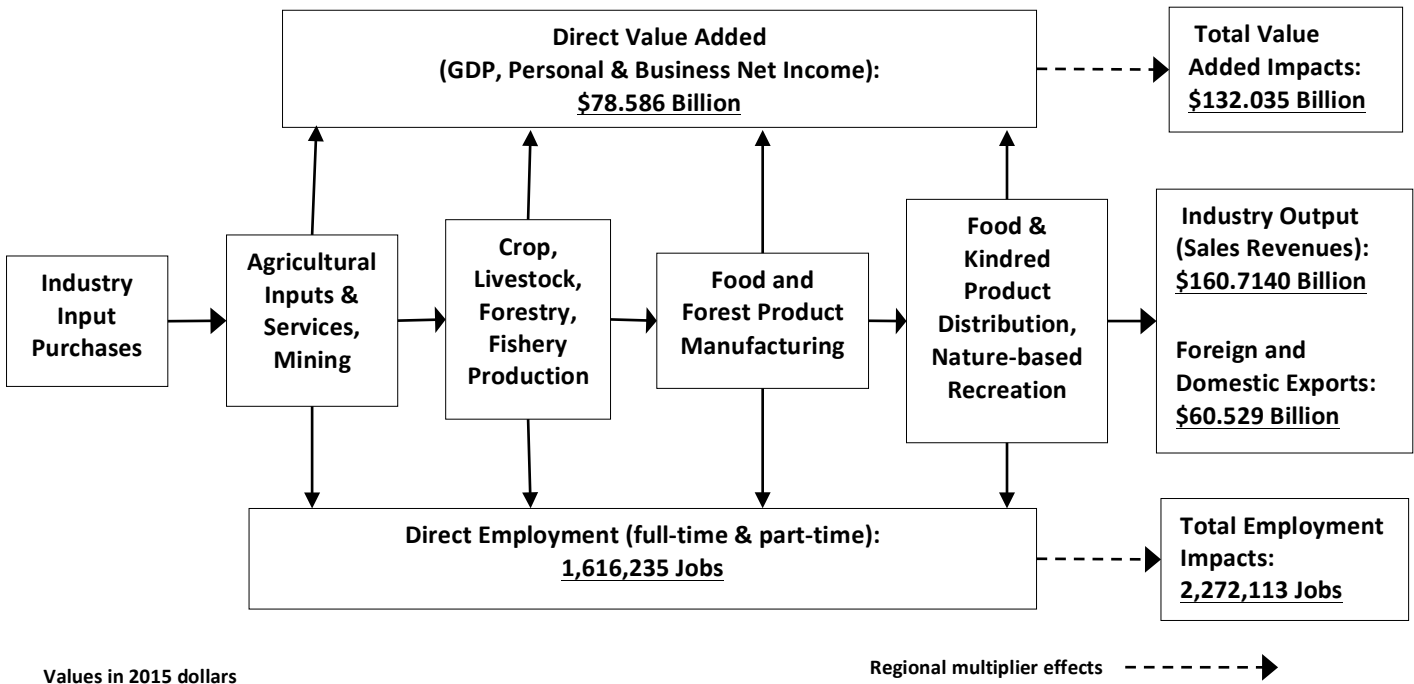

Reported employment figures represent all full-time, part-time, and temporary or seasonal jobs, rather than full-time equivalent employees. All monetary values were expressed in 2015 U.S. dollars using the mid-year (July) indices for the Gross Domestic Product (GDP) Implicit Price Deflator, which accounts for the effects of price changes in the measurement of GDP (U.S. Department of Commerce, Bureau of Economic Analysis [USDOC/BEA]). Note that *IMPLAN* data were unavailable for 2005. The *IMPLAN* industry sectoring scheme was revised in 2007 and 2013, and as a result, some industries were regrouped to evaluate trends over the entire period. Also note that previous results for 2001 to 2014 were revised, so findings presented here do not match with those previously reported (Hodges, Rahmani, and Stevens 2016, 2015, 2014, 2013, 2012, 2011; Hodges and Rahmani 2010, 2009; Hodges, Rahmani, and Mulkey 2008).

## Results

### Economic Contributions by Industry Groups and Sectors

Economic contributions of agriculture, natural resources, and food industries in Florida for 2015 are summarized in Table 1 and Figures 1-4. The industries are categorized in seven major groups: 1) Crop, Livestock, Forestry, and Fisheries Production; 2) Agricultural Inputs and Services; 3) Food and Kindred Products Manufacturing; 4) Forest Products Manufacturing; 5) Food and Kindred Products Distribution; 6) Mining; and 7) Nature-based Recreation. Results are reported below for each industry group and individual industry sector.

Direct industry output or sales revenues for agriculture, natural resources, and food industries in 2015 were \$160.714 billion, and output impacts, including multiplier effects, were \$253.370 billion. Direct value added in these industries was \$78.586 billion in 2015 and total value added impacts were \$132.035 billion. Foreign and domestic exports of goods and services outside of Florida totaled \$60.529 billion. Direct employment in these industries was 1.616 million full-time and part-time jobs, and total employment impacts (including multiplier effects) were estimated at 2.272 million jobs. The total value added contribution to Gross Domestic Product was \$132.035 billion. Total labor income impacts (employee wages, benefits and business proprietor income) were \$81.038 billion. Total other property income impacts, such as rents, interest, royalties, and dividends, amounted to \$37.997 billion. The total impact of taxes on production and imports paid to local, state, and federal governments was \$13.000 billion (Table 1).

**Figure 1.** Structure of economic activity in agriculture, natural resources, and food industries in Florida in 2015

***Crop, Livestock, Forestry, and Fisheries Production*** includes sectors that produce basic unrefined food, and fiber commodities. In 2015, direct output of these sectors was \$11.277 billion, exports were \$7.220 billion, and total output impacts were \$22.429 billion (Table 1, Figure 2). Direct employment was 130,327 jobs and total employment impacts were 212,959 jobs (Table 1, Figure 3). The total value added impacts were \$12.715 billion (Table 1, Figure 4), labor income impacts were \$7.861 billion, other property-income impacts were \$4.275 billion, and taxes on production and imports impacts were \$579 million. Among individual industry sectors in this group, those with the highest total value added impacts were Support activities for agriculture and forestry (\$3.071 billion); Greenhouse, nursery, and floriculture production (\$2.255 billion); Fruit farming (\$2.144 billion, including citrus, blueberries, strawberries, and tropical fruits); Vegetable and melon farming (\$1.485 billion); and Sugarcane and sugar beet farming (\$635 million). The sectors with the highest total employment impacts were Support activities for agriculture and forestry (46,015 jobs); Fruit farming (43,709); Greenhouse, nursery, and floriculture production (34,535 jobs); Vegetable and melon farming (17,957 jobs); Beef cattle ranching and farming, including feedlots and dual-purpose ranching and farming (14,501 jobs); and Commercial fishing (11,481 jobs). Large value added and employment impacts were also generated by the sectors for Dairy cattle and milk production (\$516 million; 5,624 jobs); All other crop farming (\$380 million; 12,991 jobs); Commercial logging (\$218 million; 4,323 jobs); Poultry and egg production (\$220 million; 2,608 jobs); Animal production (except cattle and poultry and eggs) (\$197 million; 4,895 jobs); and Forestry, forest products, and timber tracts production (\$242 million; 3,486 jobs). In addition, value added impacts of more than \$100 million were observed for Commercial hunting and trapping.

***Agricultural Inputs and Services*** includes a variety of sectors providing inputs or supporting services for agricultural operations, including landscape management. Sales revenues in 2015 to this group were \$18.563 billion, and included export sales of \$10.361 billion, resulting in total output impacts of \$32.311 billion (Table 1, Figure 2). Direct employment was 180,252 jobs and total employment impacts came to 271,940 jobs (Table 1, Figure 3). Total value added impacts were \$15.053 billion (Table 1, Figure 4). Total labor income impacts were \$9.827 billion, total other property-income impacts were \$4.364 billion, and total taxes on production and imports impacts were \$862 million. The leading sector in this group was Landscape and horticultural services, with total value added impacts of \$5.892 billion and total employment impacts of 140,053 jobs, followed by Phosphatic fertilizer manufacturing (\$5.312 billion; 48,820 jobs); Pest control services (\$1.388 billion; 46,041 jobs); and Veterinary Services (\$1.736 billion; 30,205 jobs). Other minor sectors in this group included Fertilizer mixing, Nitrogenous fertilizer manufacturing, and Pesticide and other agricultural chemical manufacturing.

***Food and Kindred Products Manufacturing*** is a large industry group with 45 individual sectors that are primarily engaged in converting unrefined agricultural commodities into food products for final consumption or use. In 2015, this industry group had direct output of \$26.829 billion, exports of \$11.135 billion, and output impacts of \$40.866 billion. Direct employment was 59,323 jobs and total employment impacts were 151,432 jobs. The industry group had total value added impacts of \$13.898 billion, labor income impacts of \$7.575 billion, other property income impacts of \$5.072 billion, and total taxes on production and imports impacts were \$1.252 billion (Table 1, Figures 2-4). Among individual sectors, the highest value added and employment impacts were for Bottled and canned soft drinks and water (\$3.345

billion; 35,494 jobs); Tobacco product manufacturing (\$1.450 billion; 1,371 jobs); Bread and bakery product, except frozen, manufacturing (\$1.016 billion; 22,660 jobs); Canned fruits and vegetable manufacturing (\$1.384 billion; 16,192 jobs); Frozen fruits, juices, and vegetables manufacturing (\$1.018 billion; 12,193 jobs); and Breweries (\$1.201 billion; 11,062 jobs). Other sectors with significant value added impacts included: Sugar cane mills and refining (\$856 million); Distilleries (\$633 million); Other animal food manufacturing (\$523 million); All other food manufacturing (\$313 million); Flour milling (\$169 million); Coffee and tea manufacturing (\$157 million); Seafood product preparation and packaging (\$151 million); and Fluid milk manufacturing (\$148 million).

**Forest Products Manufacturing** is a group of industries that processes raw timber or wood into finished wood and paper products. In 2015, this industry group had direct output valued at \$8.878 billion, exports of \$5.941 billion, and total output impacts of \$16.307 billion. This group had direct employment of 22,239 jobs, which led to total employment impacts of 73,040 jobs. It generated total value added impacts of \$6.550 billion, total labor income impacts of \$3.923 billion, total other property income impacts of \$2.189 billion, and total impacts from taxes on production and imports of \$438 million (Table 1, Figures 2-4). Leading sectors within this group in terms of value added and employment impacts were Paperboard container manufacturing (\$1.170 billion; 13,341 jobs); Sanitary paper products manufacturing (\$1.087 billion; 9,146 jobs); Paper mills (\$931 million; 9,393 jobs); and Paperboard mills (\$746 million; 7,765 jobs). Other sectors with significant value added impacts included Pulp mills (\$670 million); Engineered wood member and truss manufacturing (\$505 million); Paper bag and coated/treated paper manufacturing (\$327 million); Stationery product manufacturing (\$292 million); and Sawmills (\$183 million).

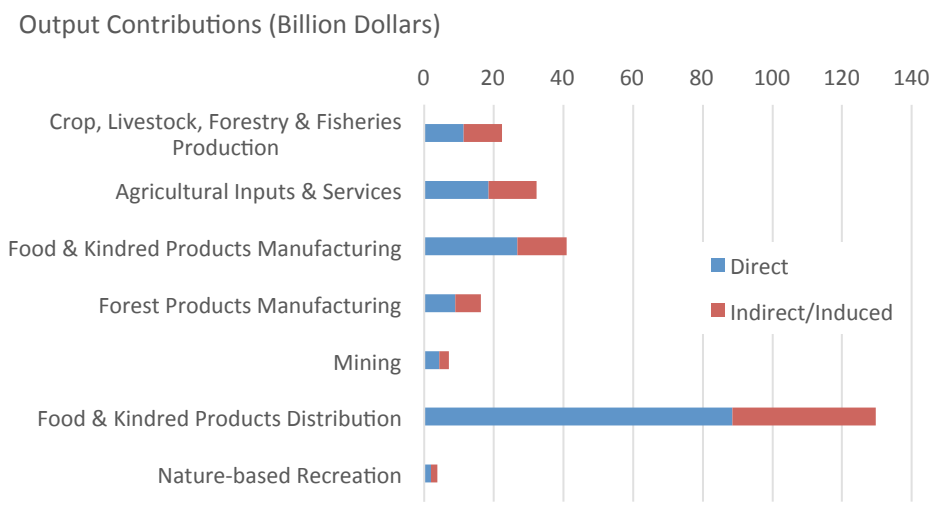

**Mining** is a natural resource-based activity for the extraction of basic mineral commodities such as oil, natural gas, stone, sand, gravel, clay, phosphate, and a variety of metals. In 2015, the mining industries in Florida collectively had direct output of \$4.255 billion, exports of \$1.958 billion, and total output impacts of \$7.119 billion. This industry group had direct employment of 28,874 jobs, total employment impacts of 48,826 jobs, total value added impacts of \$2.651 billion, labor income impacts of \$1.678 billion, other property income impacts of \$730 million, and taxes on production and imports impacts of \$244 million (Table 1, Figures 2-4). The largest individual sector in terms of employment was Extraction of natural gas and crude petroleum, which generated total employment impacts of 18,621 jobs and value added impacts of \$224 million. Other individual sectors with significant total value added and employment impacts included Phosphate rock mining (\$1.006 billion; 8,731 jobs); Stone mining and quarrying (\$611 million; 5,715 jobs); and Sand and gravel mining (\$440 million; 4,736 jobs). Other minor sectors in this industry group were Drilling oil and gas wells; Support activities for oil and gas operations; Other metal ore mining; and Other nonmetallic minerals.

**Nature-Based Recreation** includes recreational activities generally tied to natural resources or managed landscapes, such as golf and recreational fishing. In 2015, this industry group in Florida had a direct output of \$1.913 billion; exports or sales to Florida visitors of \$1.095 billion, total output impacts of \$3.895 billion, direct employment of 27,925 jobs, total employment impacts of 42,475 jobs, total value added impacts of \$2.336 billion, labor income impacts of \$1.477 billion, other property income impacts of \$729 million, and taxes on production and imports impacts of \$130 million (Table 1,

Figures 2-4). Golf courses were the dominant sector in this group, with total value added impacts of \$2.331 billion and employment impacts of 42,380 jobs. Note that these estimates do not include recreational use of public beaches in Florida.

**Food and Kindred Products Distribution** includes activities for wholesale and retail trade in agricultural, food, and related products. This group of industry sectors is only indirectly related to agriculture and natural resources because it serves to deliver products to final consumers, but it is included here for a perspective on the scope of the complex market chain for food and kindred products. In 2015, this industry group in Florida had a direct output of \$89.000 billion, exports of \$22.818 billion, and total output impacts of \$130.444 billion. It generated direct employment of 1,167,295 jobs, total employment impacts of 1,471,440 jobs, total value added impacts of \$78.833 billion, total labor income impacts of \$48.699 billion, other property income impacts of \$20.639 billion, and taxes on production and imports impacts of \$9.495 billion (Table 1, Figures 2-4). Collectively, this group represented about 59.7 percent of total value added impacts and 64.8 percent of total employment impacts for all industries included in this report. Among individual sectors within this group, Limited-service restaurants had the greatest value added impacts (\$21.681 billion), followed by Wholesale trade in food and kindred products (\$21.021 billion); Full-service restaurants (\$19.058 billion); and Retail food and beverage stores (\$11.210 billion). The largest employment impacts were generated by Full-service restaurants (508,511 jobs); Limited-service restaurants (381,967 jobs); and Retail food and beverage stores (232,749 jobs).

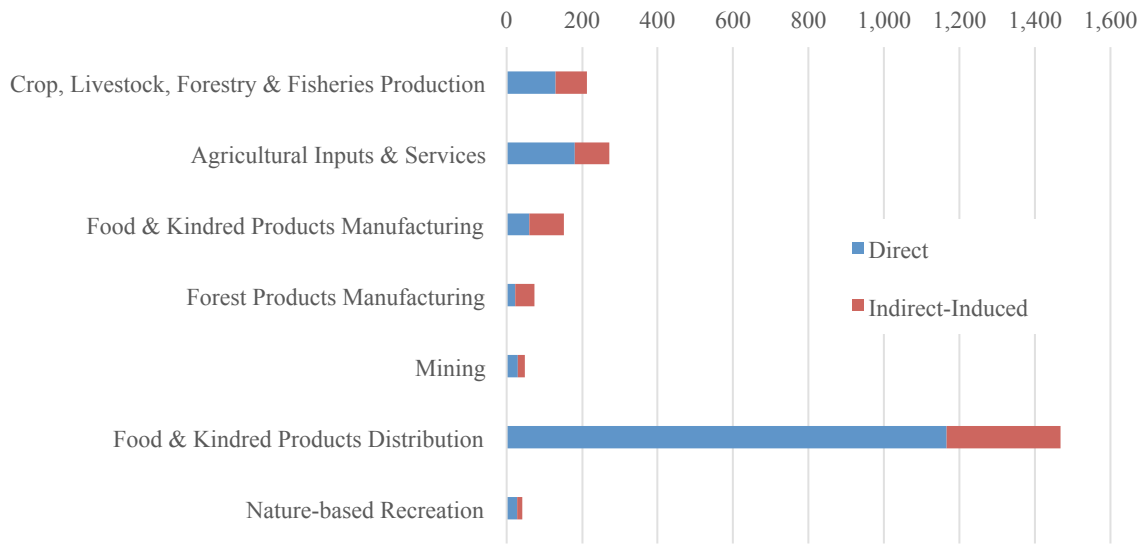

Excluding sectors for Food and Kindred Products Distribution, the total economic values for all other agriculture, natural resources, and related food industries were \$71.713 billion in direct output, exports of \$37.711 billion, output impacts of \$122.926 billion, direct employment of 448,940 jobs, total employment impacts of 800,672 jobs, value added impacts of \$53.202 billion, labor income impacts of \$32.340 billion, other property income impacts of \$17.358 billion, and tax on production and imports impacts of \$3.505 billion (Table 1).

## Economic Contributions by Agricultural Commodity Groups

In addition to the industry groups noted above, information on economic contributions was reorganized to evaluate groups of food and fiber commodities having identifiable market-chain linkages between producers, manufacturers, and service sectors. In this section, some sectors are regrouped to reflect these linkages, with results summarized in Figures 5 and 6.

**Environmental Horticulture**, which includes the sectors Greenhouse, nursery and floriculture production; Landscape services; and Retail lawn and garden centers, had combined output impacts of \$14.599 billion, value added impacts of \$8.661 billion and employment impacts of 182,546 jobs. **Fruit and Vegetable Farming and Processing**, including sectors for Fruit farming; Vegetable and melon farming; Canned fruits and vegetables manufacturing; and Frozen fruits, juices, and vegetables manufacturing, had output impacts of \$12.119 billion, value added impacts of \$6.032 billion and employment impacts of 90,050 jobs. **Livestock Farming and Animal Products Manufacturing**, including Dairy cattle and milk production; Beef cattle ranching and farming; Poultry and egg production; Animal production except cattle and poultry; Poultry processing; Fluid milk manufacturing; Cheese manufacturing; and Ice cream and frozen desert manufacturing, had output impacts of \$7.158 billion, value added impacts of \$1.921 billion and employment impacts of

34,442 jobs. **Forestry and Forest Products Manufacturing**, which includes 20 sectors, had combined output impacts of \$17.085 billion, value added impacts of \$7.009 billion and employment impacts of 80,849 jobs. **Sugarcane Farming and Refined Sugar and Confections** had output impacts of \$3.981 billion, value added impacts of \$1.644 billion and employment impacts of 18,765 jobs. **Fishing and Seafood Products** had output impacts of \$1.556 billion, value added impacts of \$730 million and employment impacts of 13,745 jobs. **Grain and Oilseed Farming and Processing** had output impacts of \$1.090 billion, value added and employment impacts of \$332 million and 3,702 jobs.

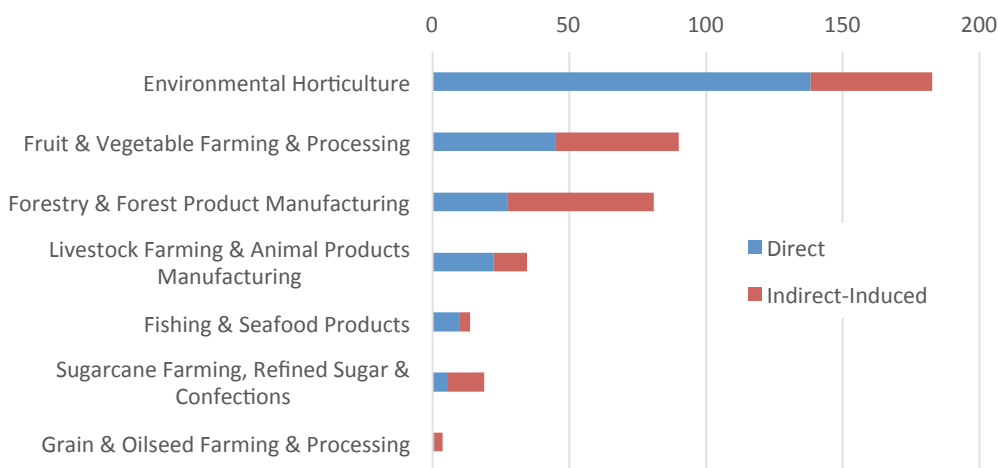

Output Contributions (Billion Dollars)

## Economic Contributions in Florida Regions and Counties

Regional economic contributions of agriculture, natural resources, and food industries in 2015 were evaluated for all 67 Florida counties and nine multi-county economic areas shown in Figure 7, with results summarized in Tables 2 and 3, and Figures 8–11. Value added and employment impacts were highest in the Miami-Ft. Lauderdale region (\$43.498 billion; 718,788 jobs), followed by Orlando (\$30.549 billion; 553,441 jobs), Tampa-St. Petersburg (\$18.772 billion; 308,734 jobs), Sarasota-Bradenton (\$12.344 billion; 239,056 jobs), Jacksonville (\$11.676 billion; 178,302 jobs), Pensacola (\$3.464 billion; 74,522 jobs), Tallahassee (\$3.109 billion; 59,031 jobs), Gainesville (\$2.805 billion; 60,363 jobs), and Panama City (\$1.876 billion; 36,550 jobs).

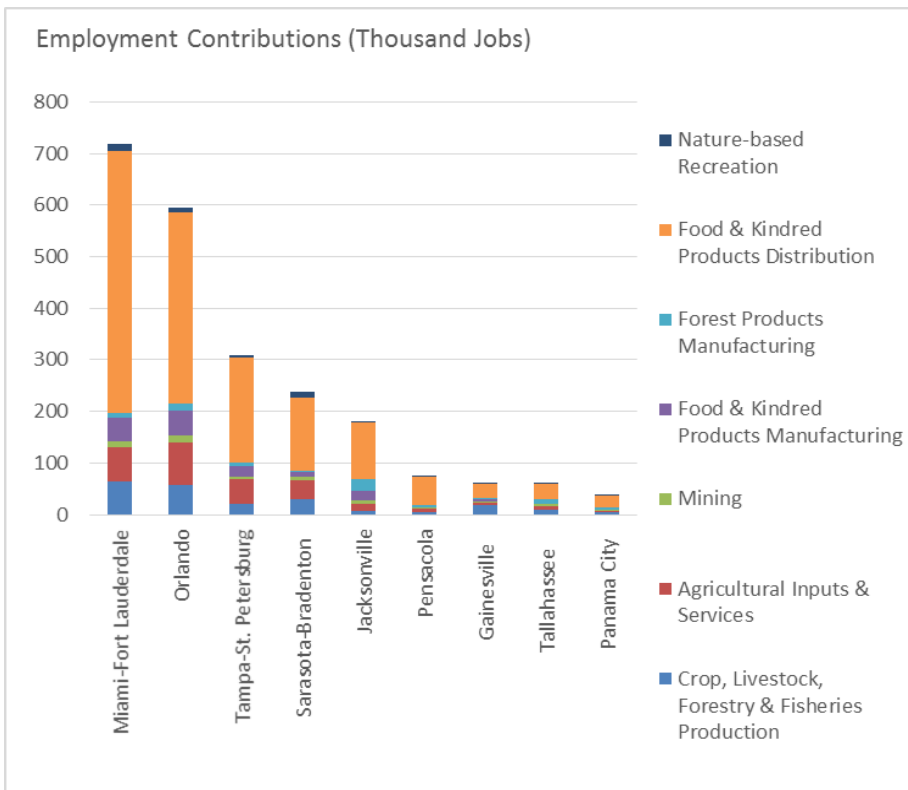

Among individual Florida counties, the nine largest in terms of employment and value added impacts in 2015 were Miami-Dade (273,336 jobs; \$17.325 billion), Orange (199,200 jobs; \$12.748 billion), Broward (188,484 jobs; \$10.913 billion), Hillsborough (180,161 jobs; \$12.695 billion), Palm Beach (172,133 jobs; \$10.600 billion), Duval (122,095 jobs; \$8.612 billion), Polk (108,340 jobs; \$7.898 billion), Pinellas (89,083 jobs; \$4.442 billion), and Lee (76,765 jobs; \$3.933 billion). Nineteen additional counties had total value added impacts exceeding \$1 billion in 2015, including Manatee (\$2.680 billion), Collier (\$2.671 billion), Seminole (\$2.481 billion), Sarasota (\$2.150 billion), Volusia (\$1.955 billion), Brevard (\$1.832 billion), Escambia (\$1.553 billion), Lake (\$1.433 billion), Marion (\$1.427 billion), Martin (\$1.163 billion), St. Lucie (\$1.228 billion), Bay (\$1.382 billion), Leon (\$1.269 billion), Alachua (\$1.232 billion), Osceola (\$1.141 billion), Pasco (\$1.140 billion), St. Johns (\$1.122 billion), Indian River (\$1.094 billion), and Okaloosa (\$1.038 billion). Also, in addition to the top nine counties listed above, an additional 28 counties had employment impacts of 10,000 jobs or greater.

Thematic maps of the employment contributions and value added (GDP) for Florida counties are shown in Figures 10 and 11, respectively. Note that although the economic contributions of agriculture and related industries may be smaller in absolute terms in many of the rural counties in the northern part of the state and the interior of the Florida peninsula, their contributions may be more important in relative terms because these industries represent a higher share of total economic activity.

Additional detailed information on economic contributions of specific industries in individual Florida counties is provided in the Appendix.

## Share of Florida Gross Domestic Product and Employment

The relative importance of agriculture, natural resources, and food industries in Florida can be gauged by their share of overall economic activity in the state. Among 17 major industry groups, Agriculture, Natural Resources, and Food industries were ranked first in Florida in terms of direct employment (Figure 12), and were second only to the Real Estate and Rental group in terms of direct value added or Gross State Product (GSP) in 2015 (Figure 13). The GSP of Agriculture, Natural Resources, and Food industries in Florida (\$78.586 billion) represented 8.8 percent of GSP (\$895.70 billion), and the total value added contributions of the industry, including regional multiplier effects (\$132.035 billion), represented 14.74 percent of GSP. Direct employment in Agriculture, Natural Resources, and Food industries (1.616 million jobs) represented 14.10 percent of total employment in the state (11,462,660), and total employment contributions of the industry (2.272 million jobs) represented 19.82 percent of all Florida jobs. Excluding the Food and Kindred Products Distribution industry group, contributions of Agriculture, Natural Resources, and Food industries represented 5.94 percent of state GDP and 6.99 percent of state employment.

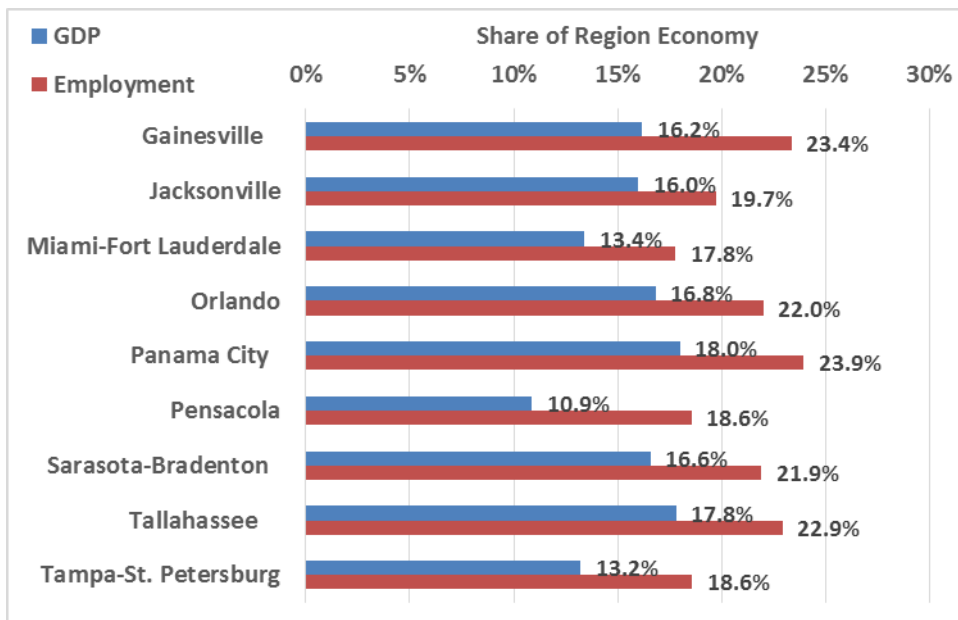

The share of total value added and employment contributions by Agriculture, Natural Resources, and Food industries in each region of the State are shown in Figure 14. Employment contributions of Agriculture, Natural Resources, and Food industries represented over 20 percent of total employment in the Gainesville, Orlando, Panama City, Sarasota-Bradenton and Tallahassee regions, while value added contributions represented over 15 percent of GDP in the Gainesville, Jacksonville, Orlando, Panama City, Sarasota-Bradenton and Tallahassee regions. The share of overall county employment and GDP contributed by Agriculture-Food industries in each Florida County are mapped in Figures 15 and 16, respectively, with greater relative contributions indicated by darker shading.

## Trends in Economic Contributions over Time

In addition to the current economic contributions made to the state of Florida by Agriculture, Natural Resources, and Food industries in the latest year of available data (2015), it is important to understand how these values have changed over time. Trends in the economic contributions between 2001 and 2015 are shown in Figures 17–23. All monetary values were adjusted for inflation and expressed in constant 2015 U.S. dollars. Note that these trends may reflect changes in commodity prices, the structure of Florida’s economy, and the business cycles of the national and global economies.

Total employment impacts in the industry grew from 1.71 million jobs in 2001 to 1.93 million jobs in 2010, declined during 2011, then recovered to 2.27 million jobs in 2015 (Figure 17). Overall employment contributions in the industry increased by 32.4 percent over the 14-year period, and averaged 2.3 percent annually, based on the best-fitting linear regression. Average annual growth in employment contributions was greatest for Mining (8.1%), Agricultural Inputs and Services (7.7%), and Food & Kindred Products Distribution (3.5%).

Total value added contributions grew from \$85.406 billion in 2001 to \$131.517 billion in 2015 in inflation-adjusted terms, representing a 54.0 percent increase, or a 3.9 percent average annual growth rate (Figure 18). Among industry groups, the average annual growth in value added impacts during 2001-15 was highest for Agricultural Inputs and Services (9.8%), followed by Food and Kindred Products Distribution (6.9%), Mining (3.8%), and Forest Products Manufacturing (1.9%), while Nature-based Recreation had the largest average annual decrease (-4.6%).

Trends in direct industry output, exports, employment contributions, and value added contributions for agricultural commodity groups in Florida during 2001-15 are charted in Figures 19–23, respectively. Direct industry output (sales revenues) for all commodity groups increased by 25.6 percent over this period, adjusted for inflation, representing an average annual rate of 1.8 percent (Figure 19). There were notable large increases in value added impacts for Environmental Horticulture (54.9%), Fishing and Seafood Products (54.5%), Grain & Oilseed Farming & Processing (34.5%), and Livestock Farming & Animal Products Manufacturing (21.9%), while Sugarcane Farming, Refined Sugar & Confections (-18.3%), and Fruit & Vegetable Farming & Processing (-14.6%) declined during this period.

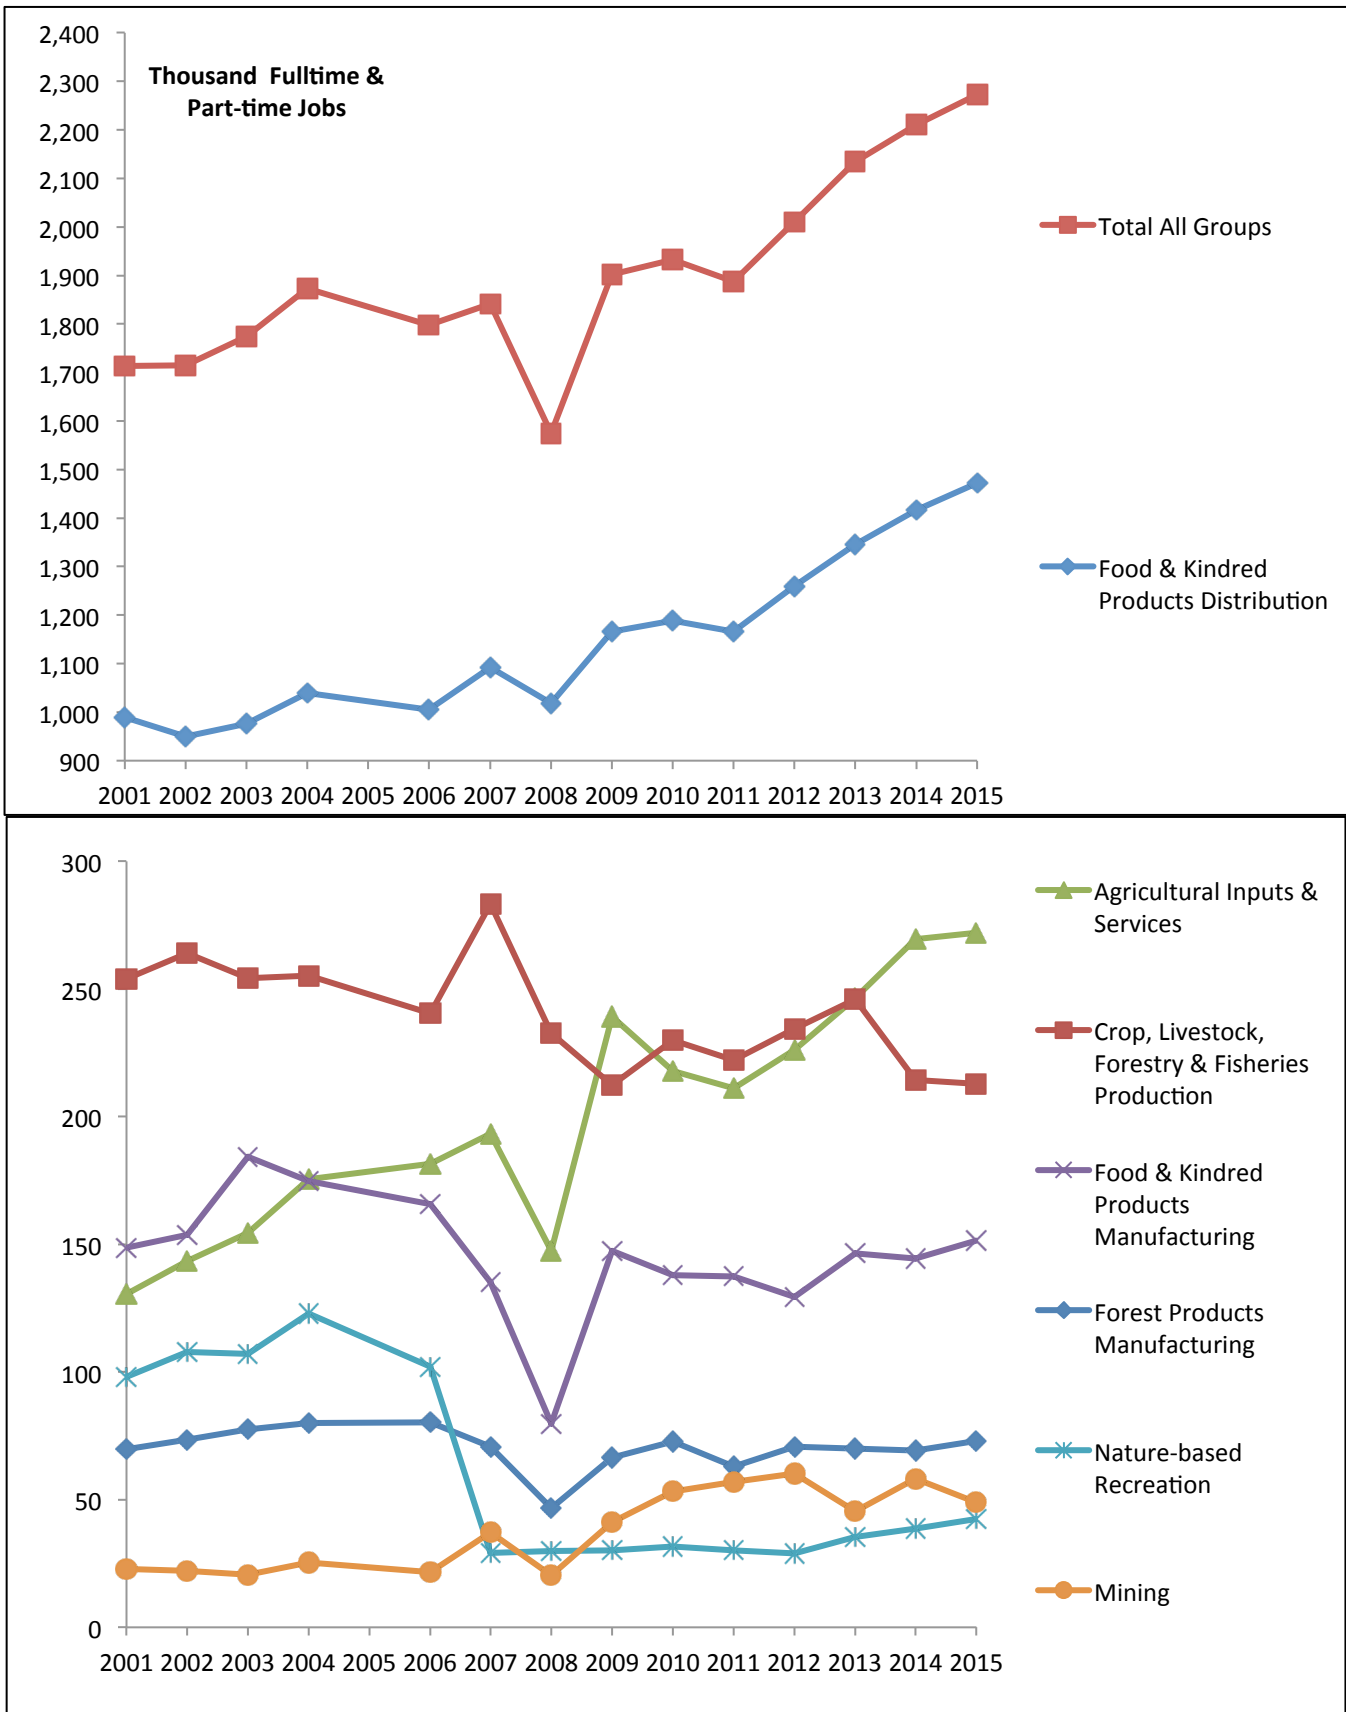

Domestic and international exports of Florida food and fiber commodities grew by 23.1 percent over the 14-year period (1.6% average annually), led by Grain & Oilseed Farming & Processing (111.1%), Livestock Farming and Animal Products Manufacturing (87.4%), Environmental Horticulture (77.7%), Forestry/Forest Products Manufacturing (21.6%), and Fishing/Seafood Products (7.4%), while Sugarcane Farming, Refined Sugar & Confections (-9.5%) and Fruit/Vegetable Farming and Processing declined (-3.8%) (Figure 20). The increase in exports contributed strongly to the total economic contributions as a result of new final demand to the Florida economy, bringing in new dollars to be re-spent, as captured by the regional multiplier effects.

Employment contributions by commodity groups increased by 19.0 percent (1.4% average annually), with notable increases for Grain & Oilseed Farming & Processing (86.0%); Environmental Horticulture (82.2%); and Fishing/Seafood Products (6.6%), but decreases for Sugarcane Farming, Refined Sugar & Confections (-46.2%); Livestock Farming and Animal Products Manufacturing (-13.4%); and Forestry/Forest Products Manufacturing (-6.2%) (Figure 22).

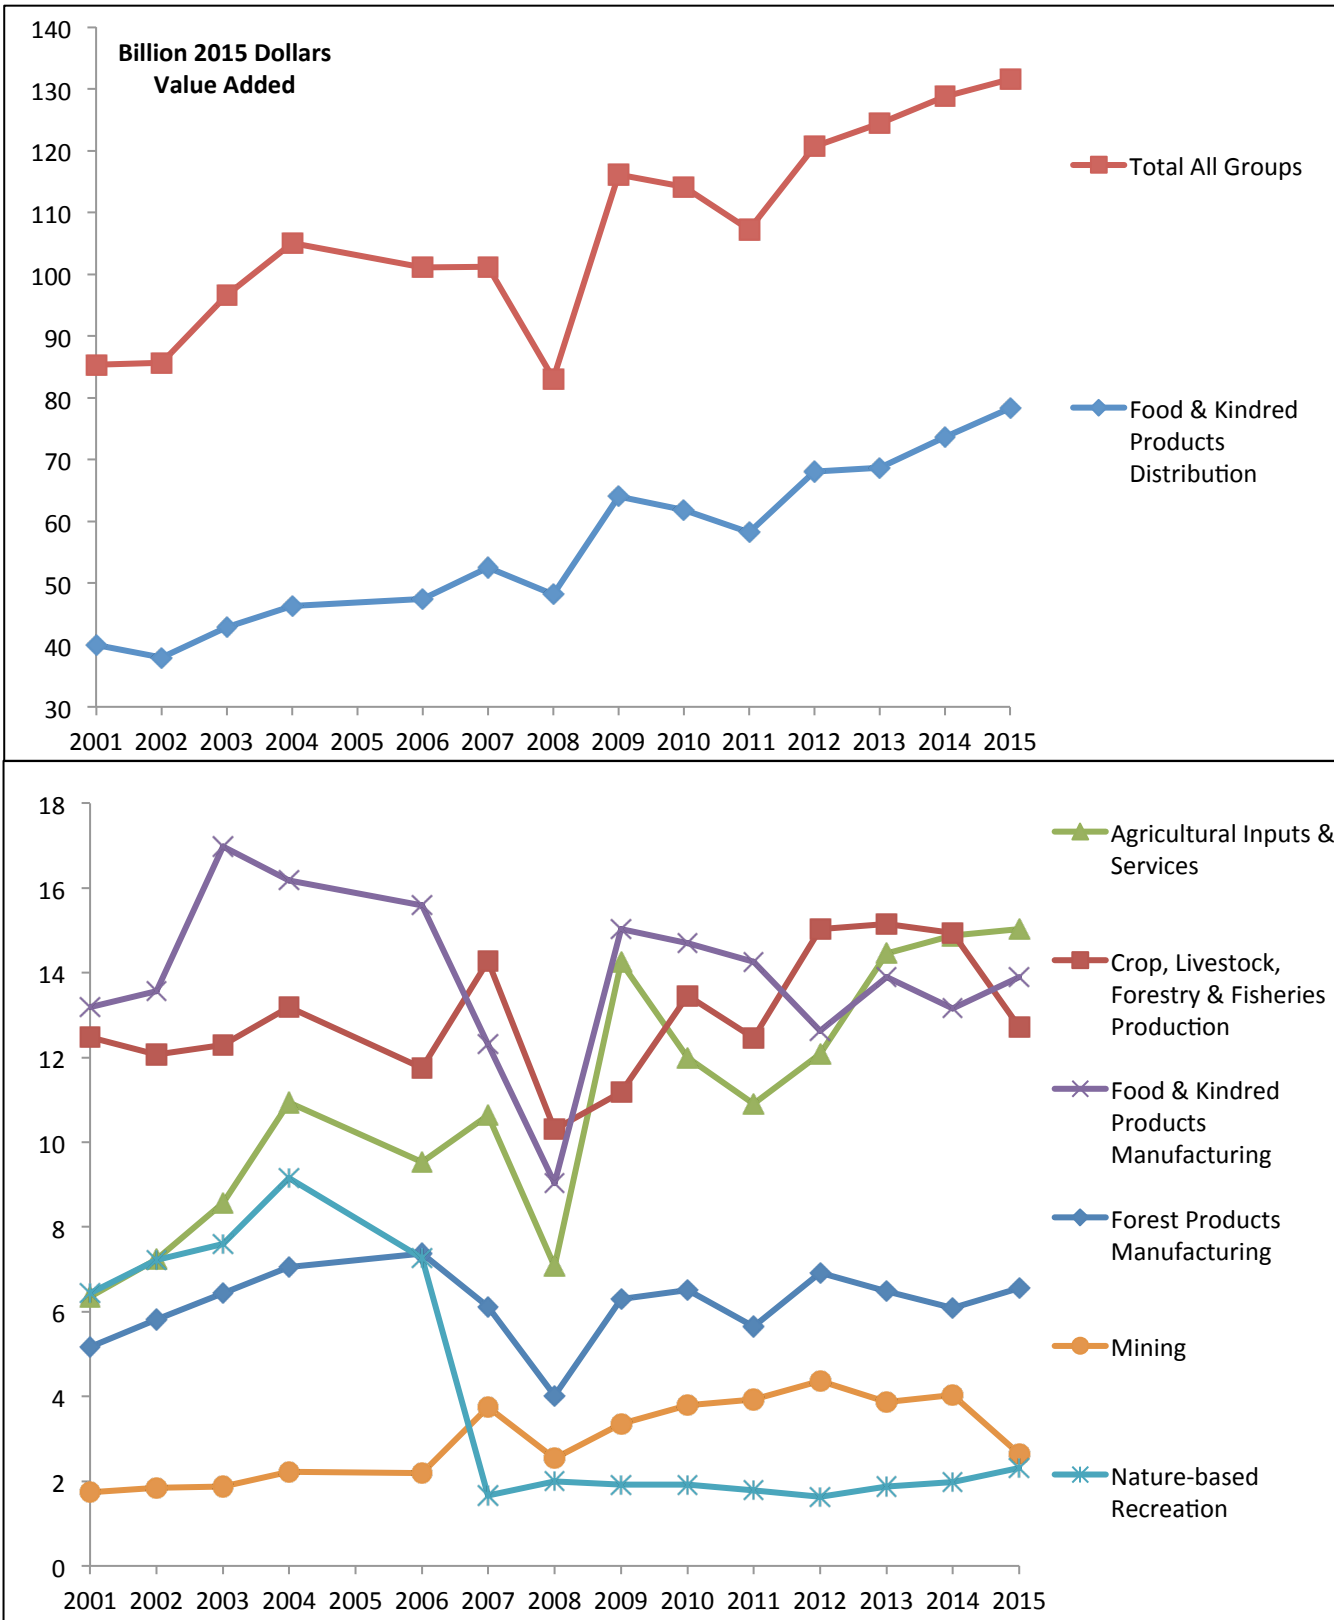

Individual crop and livestock industry sectors with large growth in direct output during 2001-15 (inflation adjusted) included All other crop farming (195.4%); Beef and dairy cattle ranching and farming (51.4%); Commercial fishing (35.5%); and Grain farming (34.1%), while Tobacco farming (-94.2%); Oilseed farming (-86.9%); Commercial hunting and trapping (-60.4%); and Forestry, forest products, and timber tract production (-60.0%) experienced declines. Input and Support industry sectors with large growth were Lawn and garden equipment manufacturing (947%), Landscape services (174%), Fertilizer manufacturing (172%), Veterinary services (119%), and Pest control services (103%). Mining industry sectors with high growth were Mining coal (21.65 times higher in 2015 than in 2001); Drilling oil and gas wells (6.19 times higher); Support activities for other mining (4.18 times higher); Support activities for oil and gas operations (1.96 times higher); and Mining and quarrying sand, gravel, clay, and ceramic and refractory minerals (1.29 times higher). Food and Kindred Product Manufacturing industry sectors with large growth were Soybean and other oilseed processing (36.87 times higher), Tortilla manufacturing (31.71 times higher), Dog and cat food manufacturing (29.91 times higher), Wineries (6.08 times higher), All other food manufacturing (5.79 times higher), Chocolate and confectionery manufacturing from cacao beans (2.86 times higher), Flour milling and malt manufacturing (2.81 times higher), Fats and oils refining and blending (2.69 times higher), and Tobacco products manufacturing (2.13 times higher). Forest Product Manufacturing industry sectors with large growth were Reconstituted wood products (75.54 times higher), Sanitary paper product manufacturing (2.59 times higher), All other miscellaneous wood product manufacturing (2.08 times higher) and All other converted paper product manufacturing (1.85 times higher). Food and Kindred Product Distribution industry sectors with large growth were Wholesale trade in food and kindred products (87%) and Food services and drinking places (74%).

Overall, the Agriculture, Natural Resources, and Food industries collectively increased direct output by 50.6 percent during 2001-15. Other major industry groups that had higher growth in direct output during this period were Utilities (99.8%), Professional and Technical Services (106.4%), Travel, Entertainment and Recreation (67.5%), Government (65.0%), Finance and Insurance (64.3%), and Wholesale Trade (52.3%).

### Conclusions

Agriculture, natural resources, and food industries in Florida represent a broad array of economic activities, including commodity production, food and kindred product manufacturing, distribution, and related service activities. These industries collectively had a significant economic impact on Florida’s economy in 2015, with industry output or sales revenues of \$160.714 billion, direct employment of 1.62 million jobs, total employment impacts (including regional multiplier effects) of 2.27 million jobs, accounting for 19.8 percent of state employment, and total value added impacts of \$132.035 billion, representing 14.7 percent of the state’s Gross Domestic Product. These industries are geographically distributed throughout the state, with major activity in urbanized metropolitan areas, but are relatively more important as a share of total economic activity in rural counties. The Agriculture, Natural Resources, and Food industries have grown substantially since 2001, interrupted by the global recession, but continuing to recover in 2015, with total regional economic impacts buoyed by increased exports. Growth in economic activity of agriculture, natural resources, and related food industries during the past ten years contributes to the stability and sustainability of the state’s economy.
