Economic Importance of Food and Fiber in the Georgia Economy, 2009

Executive Summary

Economic activity that begins with production of food and fiber products forms an integrated system that impacts the state economy. The system includes production inputs, direct processing, further processing, distribution, and retail consumption. The food and fiber system is composed of industries involved in agricultural and forestry production, including support services; food and fiber processing and manufacturing; production inputs; food retail and wholesale trade; and food services. Employment in the total food and fiber sector of 691,731 employees is more than any other sector in the economy. Sales of \$106.9 billion rank the total food and fiber sector first among all Georgia economic sectors. The food and drink manufacturing sector has more employment and output value than any other Georgia manufacturing sector. Overall, food and fiber accounts for 13.2% of employment, 15.5% of output, and 10.9% of value added in the Georgia economy for 2009.

Economic Importance of Food and Fiber in the Georgia Economy, 2009¹

Food and fiber products are necessities for Georgia consumers. Economic activity that begins with production of food and fiber products forms an integrated system that impacts the state economy. The system includes production inputs, direct processing, further processing, distribution, and retail consumption. This report has two sections: 1) definition of components included in the food and fiber system, and 2) quantification of contributions to the state economy in terms of employment, output, and value added.

Economic Sectors of the Georgia Food and Fiber System

Sector data applied in this analysis are from the Minnesota IMPLAN Group, Inc. (MIG 1997) for 2009. Previous studies serve as a guide in defining sectors included in the Georgia food and fiber system. Farm and farm-related employment are defined by USDA, ERS as industries having 50% or more of their work force employed in providing goods and services necessary to satisfy the final demand for agricultural products. Indirect agribusinesses have between 32% and 50% of employment providing goods and services related to agricultural products. Industries are aggregated into groups related to farm production; agricultural services, forestry, and fishing; agricultural input industries; agricultural processing and marketing industries; wholesale and retail trade of agricultural products; and indirect agribusiness (USDA, ERS 2005). Previous analysis of the Georgia food and fiber economy by Kriesel and Jones (1998) is patterned from a study by Sporleder, Hushak, and Pai (1990). Kriesel and Jones determined that the food and fiber system composed 16% of total employment for the 1995 Georgia economy. Food and fiber made up 16% of output in terms of sales value and 12% of value added.

This report follows elements of the previous studies (USDA, ERS 2005, Kriesel and Jones 1998) while proposing a revised listing of sectors to include in the food and fiber system. Categories of the food and fiber system are: 1) agricultural and forestry production, including support services, 2) food and fiber processing and manufacturing, 3) production inputs, 4) food retail and wholesale trade, and 5) food services. Food and fiber employment, output (sales), and value-added are derived from the IMPLAN model 440-sector scheme. Food commodities are regarded as food throughout the system, from production to final consumption. In contrast, fiber commodities are considered as fiber only up to a point in processing and manufacturing. Beyond this point, fiber commodities are viewed as a finished product beyond the stage of a fiber commodity. For example, from the broad sector of textiles, only fabrics and leather are included as fiber commodities. Included in fiber manufacturing are yarn and thread mills, as well as fabric mills. Manufacturing processes beyond fabric manufacturing are excluded. Leather tanning and product manufacturing are included, but footwear manufacturing is excluded. Wood products are excluded as fiber for the manufacturing sectors of manufactured or mobile homes, prefabricated wood buildings, and furniture. Paper products exclude paper office supplies, envelopes, stationery, and other converted paper manufacturing. Wholesale and retail trade, as well as warehousing and storage of fiber products, is not included as part of the food and fiber system. A listing of IMPLAN sectors included in the food and fiber system is presented in Table 1.

* IMPLAN sectors 319, 324, 326, 329, 340, and 388 are adjusted to derive the food portion by applying data from the 2007 Economic Census (US Census Bureau 2009).

Table 2 presents employment, output, and value added of the Georgia food and fiber system. Food warehousing and storage is aggregated with retail and wholesale trade. Value added is defined as final sales less the cost of materials purchased to produce output (Shaffer, Deller, and Marcouiller 2004). Value-added is also referred to as gross state product. Employment, output, and value added for industries outside of the food and fiber system are included in Table 2. Employment in the total food and fiber sector of 691,731 employees is more than any other sector in the economy. Sales of \$106.9 billion rank the total food and fiber sector first among all Georgia economic sectors. Total value added of \$42.5 billion is the third greatest sector after 1) the aggregate sector of financial, real estate, and rental services and 2) wholesale and retail trade for other than food. Food and fiber accounts for 13.2% of employment, 15.5% of output, and 10.9% of value added in the Georgia economy. Food and drink manufacturing has more employment and output than any other Georgia manufacturing sector. Food and drink manufacturing employment of 67,609 jobs is 37.5% greater than textile manufacturing with 42,202 jobs, the next highest manufacturing sector. Within the food and fiber system, the food services component has the most employment with 330,096 jobs. Food and drink manufacturing has the greatest output and value added within the food and fiber sector.

Summary

The food and fiber system is composed of industries involved in agricultural and forestry production, including support services; food and fiber processing and manufacturing; production inputs; food retail and wholesale trade; and food services. Employment in the total food and fiber sector of 691,731 employees is more than any other sector in the economy. Sales of \$106.9 billion rank the total food and fiber sector first among all Georgia economic sectors. The food and drink manufacturing sector has more employment and output value than any other Georgia manufacturing sector. Overall, food and fiber accounts for 13.2% of employment, 15.5% of output, and 10.9% of value added in the Georgia economy for 2009.
